*Please check your breeding plan (genotype, mouse fertility and other important details), for this is extra service, so **you have only one chance. If your mice are not getting pregnant after 2 try, the case would be cancelled**, and you should purchase this strain from the original source. The whole service should be finished in 70 days.

21 days(gestation) + 35 days(new generation) + 14(second try) = 70 days

Once the clean-up case closed, all mice remained in quarantine room should be removed.
